

Rolling Plan for the Republic of Chile

June, 2012

Basic Policy of the Assistance	Contribution to a sustainable development through the strengthening of capacities to take environmental measures, focused on disaster prevention.
--------------------------------	---

Priority Area		Environmental measures focused on disaster prevention											
Development Issue 1-1	[Background and current situation] In Chile, the matters related with contamination, such as, air, water and solid waste are priority issues for the Government, due to the economic development and the concentration of the population, as well as the problems related with climate change. In 1994, the National Environmental Commission (CONAMA) was created, to strengthen environmental management, the Environment Minister was named in 2007 and in October 2010, the Environment Ministry and Superintendent for the Environment were created. However, for a suitable environmental management it is necessary to strengthen the workings of the public organizations in charge of these issues. On the other hand, in 2012, the National Energy Strategy for the next 20 years was presented, which promotes efficient energy, renewable energy and hydroelectric energy; however, to make this happen, the technical foundations are weak due to the lack of research centers and qualified human resources.				[Strategy] Assist the establishment of the environmental public system and in the improvement of the capacity of the public sector in climate change areas, through technical cooperation led by the Environment Ministry and the Environment Superintendence created in 2010. This taking into consideration the use of the results obtained from the technical cooperation project made in 2010 "Project on Development of Environmental Education Model to Strengthen Local Capabilities".
